Scientists – Founders – Entrepreneurs

Infrastructure for research institutes, the university and SME
Synergy for new technologies

Interdisciplinary Center of Materials Science (CMAT)

TGZ Bio-Nano Center

Research facility for physicists, chemists, materials scientists, biologists, pharmacists
Max Planck, Fraunhofer, SME

CMAT = nanotechnology pilot plant of the University

- ◆ Nanostructuring: lithography, thin film deposition, device prototyping
- ◆ Nanoanalysis: electron microscopy, optical characterization, positron annihilation
- ◆ 1800 m² labs, 620 m² cleanroom

Cleanroom of Nanotechnikum Weinberg

- ◆ MLU + Max Planck institute + Fraunhofer institutes
- ◆ 620 m² cleanroom class 10000/100/10

Analytical labs of Nanotechnikum Weinberg

- ◆ Various electron microscopes
- ◆ Raman microscopy, ellipsometry
- ◆ Positron annihilation
- ◆ Scanning probe microscopy
- ◆ Electrical/thermal transport measurements

Renewable energy materials

- ◆ Silicon-based nanostructured thin film materials as functional elements for next-generation solar cells

- ◆ Si and Si-Ge thin films for thermoelectric applications

- ◆ New supercapacitors as energy storage devices

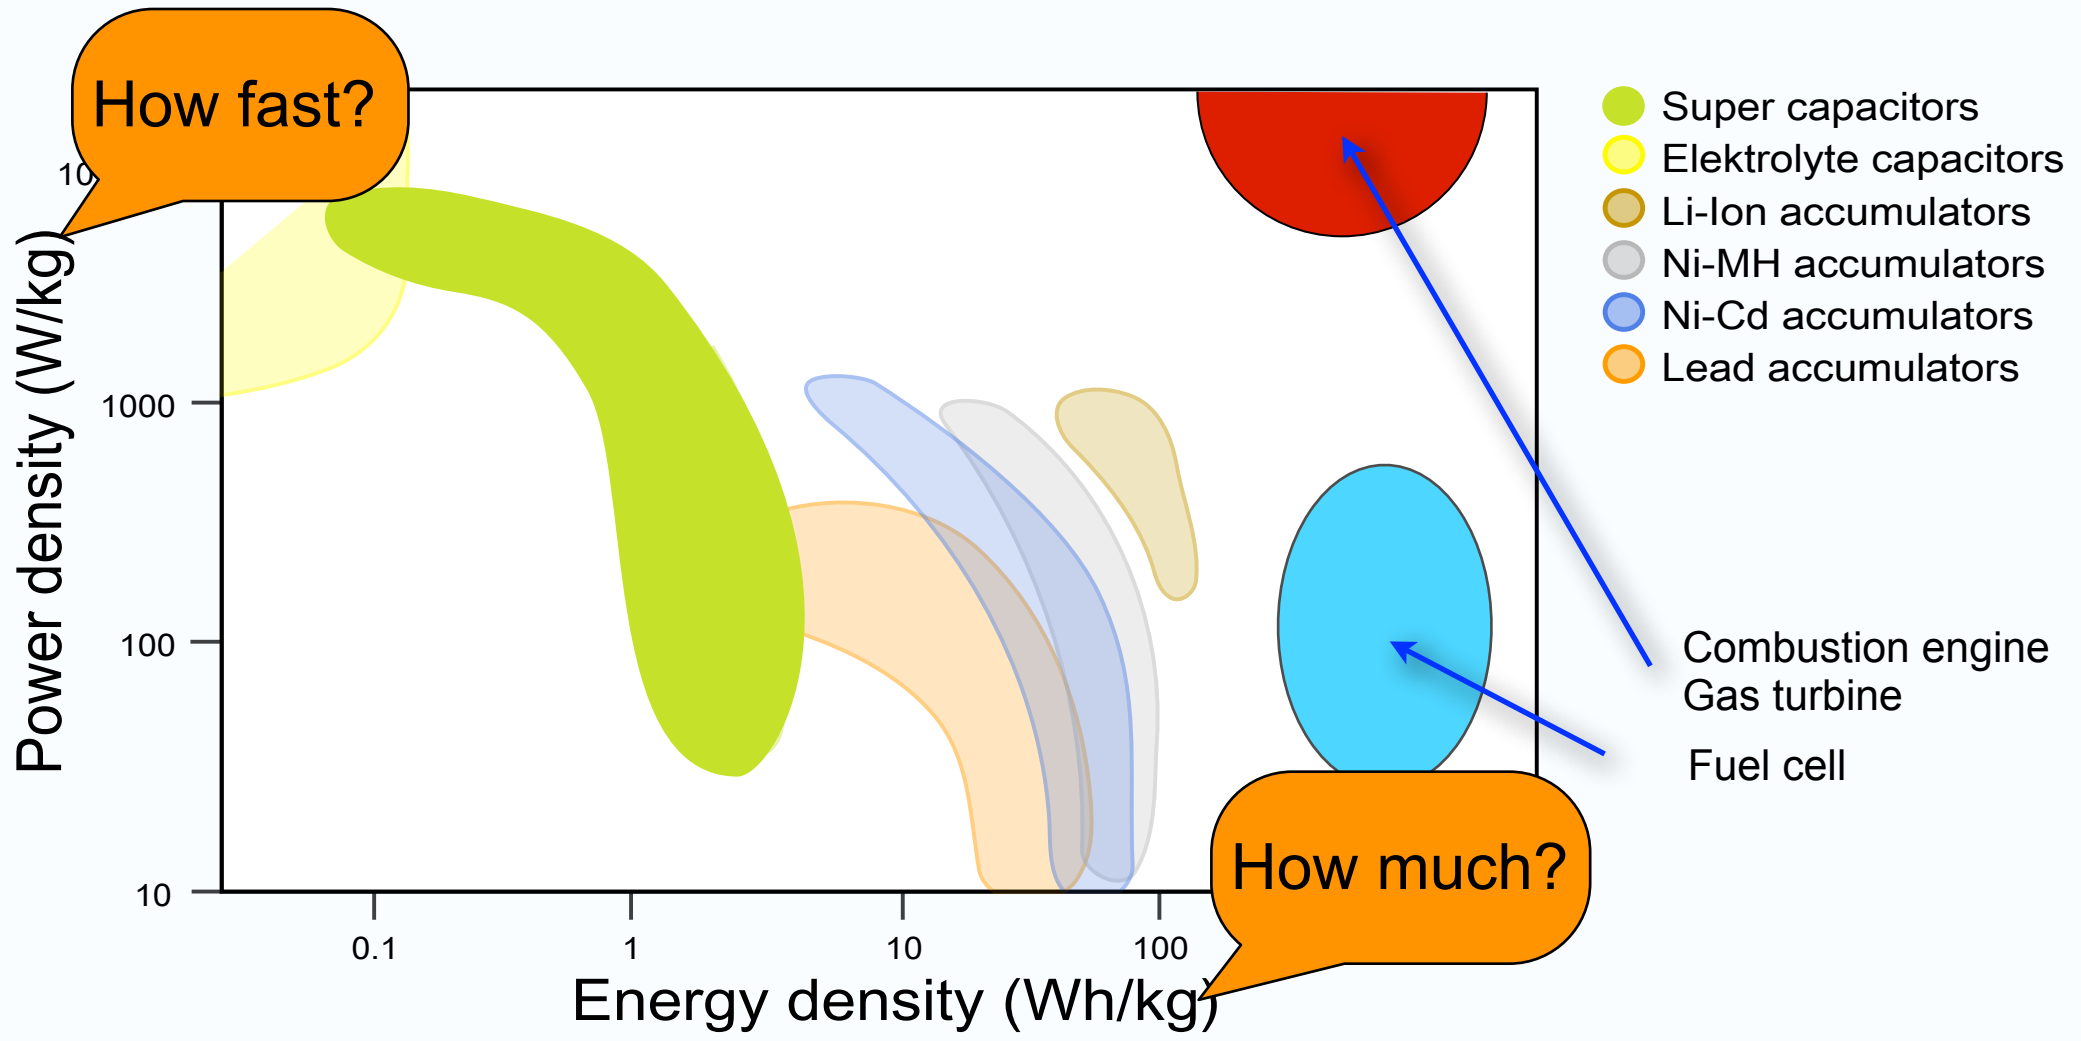

Energy concept of Saxony-Anhalt

“Energienstudie mit Prognosen der Energiekennzahlen für die Jahre 2020 und 2030 zur Vorbereitung der Fortschreibung des Energiekonzeptes der Landesregierung von Sachsen-Anhalt”

→ Demand for energy storage

Ragone diagram

Capacitors

Capacitance C = Amount of charge stored per unit voltage

$$C = \epsilon_r \epsilon_0 \frac{A}{d}$$

ϵ_0 vacuum permittivity $\approx 9 \cdot 10^{-12}$ F/m

ϵ_r relative static permittivity of the dielectric
(sometimes called dielectric constant)

Energy stored:
$$E = \frac{1}{2} C U^2 = \frac{1}{2} \epsilon_r \epsilon_0 \frac{A}{d} U^2$$

Commercially available standard capacitors

Ceramic capacitors

based e. g. on barium titanate

- + high permittivity
- + thermal stability
- + allow high frequencies
- brittle

Thin-film polymer capacitors

e. g. PET, PP

- + high voltage
- + low conductivity
- + simple shapes
- low permittivity

Composite capacitors

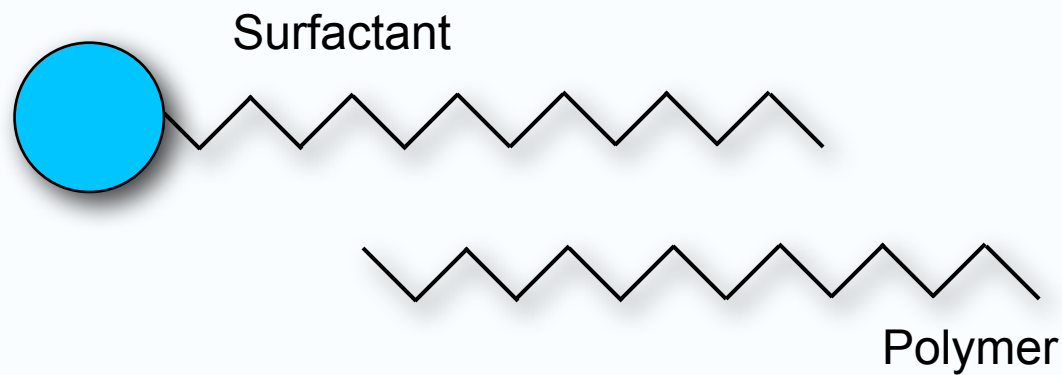

Composite dielectrics

Oxide particle
polar, hydrophilic

Polymer matrix
nonpolar, lipophilic

Composite capacitors

Nanoparticles of ceramic dielectrics like BaTiO_3

Specific surface coating

Embedding in polymer or glassy matrix

Processing to thin films and electric contacting

Single capacitor

Multilayer capacitor

Assembly

Module

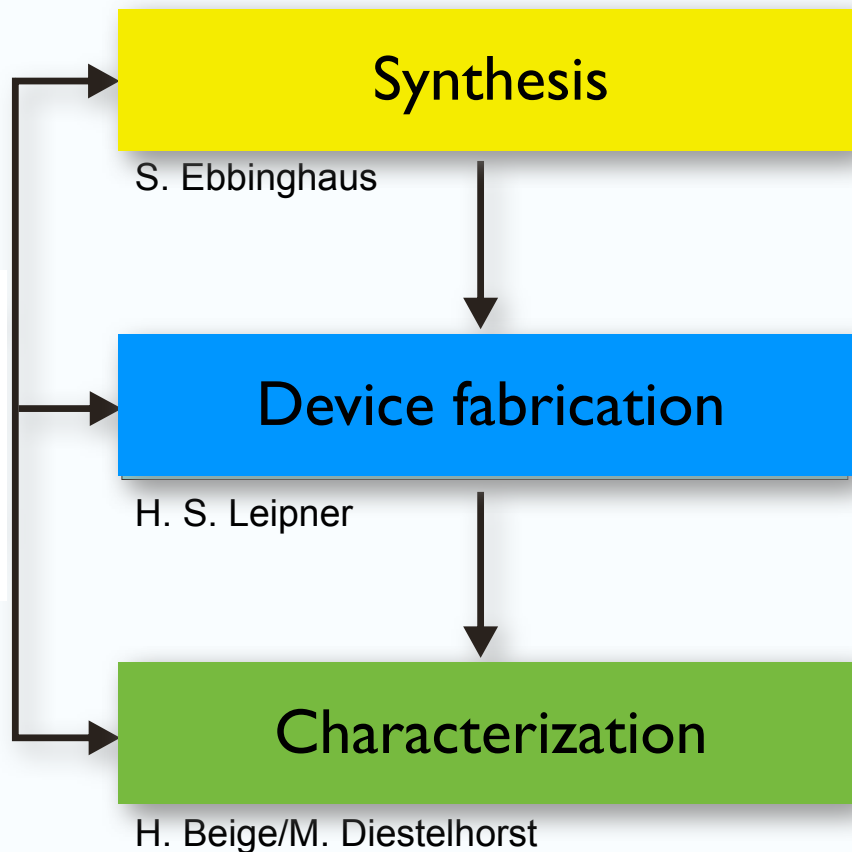

Advantages of composite supercapacitors

- ◆ Robust, negligible aging, high lifetime
- ◆ High charging voltages
- ◆ Thermal stability (operation temperatures $> 60\text{ }^{\circ}\text{C}$ possible)
- ◆ No cooling
- ◆ High charging or discharging rates
- ◆ High efficiency
- ◆ Modular structure
- ◆ Environmentally friendly
- ◆ Reasonable energy and power density

Super-Kon collaboration

Institut für Chemie

- ◆ Synthesis of oxides and coating
- ◆ Thin film preparation
- ◆ Sintering spin coating, spray coating

Interdisziplinäres Zentrum für Materialwissenschaften

- ◆ Elektrodes
- ◆ Device fabrication
- ◆ Structure characterization

Institut für Physik

- ◆ Electric/dielectric characterization
- ◆ Theory/simulation

Device performance

Polymer composites

- ◆ BaTiO₃ nanoparticles
- ◆ Matrix: P(VDF-HFP)
- ◆ max. permittivity (1 kHz): 50
- ◆ max. field strength: 100 V/μm
- ◆ Energy density ~ 10 J cm⁻³

Glassy composites

- ◆ Ba(Ti,Ge)O₃ nanoparticles
- ◆ Matrix: BBS glass
- ◆ max. permittivity (1 kHz): 4000
- ◆ max. field strength: 6 V/μm
- ◆ Energy density ≈ 1 J cm⁻³

- ◆ Electrodes investigated: Aluminium, Silber, Gold

Next targets of the Super-Kon project

- ◆ *Proof-of concept* →
Development of a demonstrator module
- ◆ Analysis of the electrical break down; defect studies
- ◆ Testing in industrial environment
 - Influence of temperature, humidity, vibrations
 - Storage time, long-term stability
 - Compliance with industry standards
- ◆ Application for energy harvesting

Technology roadmap

“Did anyone call for high-power, infinitely rechargeable electrical energy storage?”

Super-Kon-Team:

H. Beige, A. Buchsteiner, M. Diestelhorst,
S. Ebbinghaus, C. Ehrhardt, J. Glenneberg,
T. Großmann, S. Lemm, W. Münchgesang,
C. Pientschke, K. Suckau, G. Wagner, M. Zenkner
